Empathy Map Canvas

An Empathy Map helps understand the thoughts, emotions, behaviors, challenges, and expectations of the target users. It enables the development team to design a solution that focuses on user needs and improves the networking experience.

For the **Personalized Networking Assistant (Smart Connect AI)**, the primary users are students, job seekers, professionals, researchers, entrepreneurs, and conference participants.

Empathy Map

USER PERSONA

Name: - Alex (Representative User)
Age: - 22–35 Years
Occupation: - Student / Software Engineer / Researcher / Entrepreneur
Goal: - To prepare confidently for networking events by generating intelligent conversation starters, learning about discussion topics, and building professional relationships.

THINK & FEEL The user thinks: • I want to make a good first impression. • I don't know how to start conversations. • I hope I don't run out of topics. • I need reliable information before attending events. • I want to build valuable professional connections. • I want to feel more confident during networking. • I wish networking preparation was easier. • I want personalized suggestions based on my interests.	SEE The user sees: • Conferences and seminars. • Career fairs and placement drives. • Workshops and hackathons. • Professionals networking confidently. • LinkedIn connections growing. • AI technologies becoming more common. • Competition for internships and jobs. • Professional networking opportunities everywhere.
SAY The user says: • I don't know what to ask. • How can I start the conversation? • Can you suggest networking questions? • Tell me about this company. • Help me prepare for this event. • I want to make meaningful connections. • I need reliable information quickly. • I want to improve my communication skills.	DO The user: • Attends conferences and workshops. • Searches Google for event information. • Reads company profiles. • Watches interview preparation videos. • Practices communication skills. • Uses AI tools for preparation. • Saves useful networking notes. • Shares feedback after networking sessions.

HEAR The user hears: • Advice from mentors. • Career guidance from professors. • Industry experts discussing new technologies. • Friends sharing networking experiences. • Recruiters explaining job opportunities. • Speakers presenting innovative ideas. • Professional recommendations. • AI and technology trends.	GAINS The user expects: • AI-generated conversation starters. • Personalized networking assistance. • Reliable knowledge verification. • Improved confidence. • Better communication skills. • Easy event preparation. • Networking session history. • Attractive and easy-to-use web application. • Faster access to trusted information. • Better professional relationships.
--	--

PAINS

The user's biggest challenges include:

- Difficulty initiating conversations.
- Fear of rejection.
- Lack of confidence.
- Limited knowledge about discussion topics.
- Time-consuming event preparation.
- Difficulty remembering previous networking interactions.
- No personalized networking guidance.
- Information overload before events.

User Needs

The user requires:

- Intelligent conversation suggestions.
- Topic verification using trusted sources.
- Simple and responsive interface.

- Quick event analysis.
- Personalized recommendations.
- Secure session storage.
- Easy feedback mechanism.
- Professional networking support.

Conclusion

The Empathy Map clearly shows that users require an intelligent assistant that reduces networking anxiety, provides reliable information, and generates meaningful conversation starters. The **Personalized Networking Assistant (Smart Connect AI)** addresses these needs through Artificial Intelligence, FastAPI, Streamlit, Natural Language Processing, and Wikipedia integration, enabling users to communicate confidently and build stronger professional connections.
