Customer Journey Map

Project Name	Personalized Networking Assistant
Repository	https://github.com/Alisha40477/Personalized-Networking-Assistant
Website	AI-powered web application developed using FastAPI and Streamlit for generating intelligent conversation starters, verifying knowledge using Wikipedia API, saving networking sessions, and collecting user feedback.
Team Members	Mohammed Mahaboob Alisha Shaik (Team Lead) • Madisetty Srideepthi • Vadali Prabhas Mallik • Thaddi Madhu

Customer Journey Map

A Customer Journey Map represents the complete experience of a user while interacting with the Personalized Networking Assistant. It illustrates each stage of the user's journey, including actions, thoughts, emotions, pain points, opportunities, and expected outcomes. This helps the development team understand user behaviour and improve the application's usability and effectiveness.

Target Users

- Students
 - Job Seekers
 - Software Professionals
 - Researchers
 - Entrepreneurs
 - Conference Participants
 - Career Fair Visitors
-

Customer Journey Table

Journey Stage	User Actions	User Thoughts	Pain Points	Proposed Solution	User Experience
1. Discover Application	Opens Smart Connect AI	"Can this help me prepare for networking?"	Unsure about the application's usefulness	Attractive homepage with project overview	Curious and interested
2. Enter Event Details	Enters conference, seminar, or workshop des	"I need good conversation topics."	Doesn't know how to begin conversations	AI analyzes event description	Comfortable
3. Generate Conversation Starters	Clicks Generate Smart Starters	"I hope I get useful questions."	Lack of networking confidence	AI generates personalized conversation starters	Confident
4. Verify Discussion Topics	Searches a topic using Knowledge Assistant	"Is this information reliable?"	Difficulty finding trusted information	Wikipedia API provides verified information	Informed
5. Save Networking Session	Saves generated conversation history	"I may need this later."	Difficult to remember previous discussions	Session history is stored in JSON	Organized
6. Submit Feedback	Shares application feedback	"The application was helpful."	No easy way to provide suggestions	Feedback collection system	Satisfied
7. Future Networking Events	Uses the application again	"This makes preparation much easier."	Repeating preparation manually	Reusable AI-powered assistant	Happy and Confident

Customer Emotions During Journey

Stage	Emotion
Discover Application	😊 Curious
Enter Event Details	😊 Hopeful

Stage	Emotion
Generate Conversation Starters	 Excited
Verify Knowledge	 Confident
Save Session	 Organized
Submit Feedback	 Satisfied
Future Usage	 Loyal User

Pain Points Identified

- Difficulty starting conversations.
- Lack of confidence at networking events.
- Limited knowledge about discussion topics.
- Time-consuming event preparation.
- Difficulty remembering previous networking sessions.
- No personalized networking guidance.
- Finding reliable information from multiple websites.
- Poor preparation before conferences and career fairs.

Opportunities

The Personalized Networking Assistant provides opportunities to:

- Generate AI-powered conversation starters.
- Analyze networking events intelligently.
- Verify knowledge using the Wikipedia API.
- Store networking history for future reference.
- Collect valuable user feedback.
- Improve communication skills.
- Increase confidence during professional networking.

- Reduce preparation time.
 - Deliver a modern, user-friendly Streamlit interface.
-

Expected Outcomes

After using the application, users will be able to:

- Communicate more confidently.
 - Start professional conversations easily.
 - Prepare effectively for conferences and seminars.
 - Access trusted information quickly.
 - Save useful networking sessions.
 - Build stronger professional relationships.
 - Improve networking and communication skills.
 - Increase career and internship opportunities.
-

Customer Journey Summary

The Customer Journey Map demonstrates how the **Personalized Networking Assistant (Smart Connect AI)** supports users throughout their networking preparation process. From entering an event description to generating AI-powered conversation starters, verifying information, saving networking history, and submitting feedback, the application provides a complete and user-friendly experience. This structured journey improves user confidence, enhances communication skills, and enables more meaningful professional interactions.
